

Fluence to exhibit its latest technologies at IFAT 2018

May 14-18, Munich, Germany. Hall A2, Booth 205.

Visit the Fluence stand at hall A2, booth 205 to meet our experts who'll share onsite demos of our efficient, effective and highly sustainable solutions. Fluence will showcase our latest solutions in water, wastewater and waste-to-energy.

Municipal Wastewater Treatment

Fluence's advanced MABR (Membrane Aerated Biofilm Reactor) wastewater treatment technologies combine nitrification and denitrification to simultaneously treat nitrogen and phosphorus, with energy consumption of up to 90% less than with traditional treatment methods. Fluence MABR uses passive aeration, the diffusion of oxygen through membranes. Packed in compact containerized systems, it provides efficient on-site treatment that meets the strictest discharge regulations. At IFAT, Fluence will display its new smart packaged wastewater treatment solution based on the innovative MABR technology.

Waste-to-Energy Solutions

To guarantee the long-term sustainability of resources, Fluence offers innovative waste-to-energy solutions that treat wastewater and produce energy. Fluence provides a variety of industries with cost-effective closed-loop solutions to dispose of difficult wastewater and sludge while producing renewable energy. At booth 205, you'll see how Fluence applies its anaerobic digestion solutions to a variety of industries, including dairy farms, meat processing plants, and paper companies, as well as the new advanced anaerobic reactor configuration that makes the most of renewable energy production, while producing a high-quality effluent.

Water Treatment

With its NIROBOX™ line, Fluence offers the most compact water treatment solutions, that allow decentralized desalination systems to be deployed to supply local populations and industries with high quality water at a viable cost. Unlike large-scale desalination plants, Nirobox containerized units offer a fast 'time-to-water' and can be deployed in months, rather than years. This opens new opportunities to immediately address water shortages and needs. With seawater and brackish water desalination models, as well as a freshwater treatment model, the Nirobox line of products can provide a suitable solution to your needs.

We look forward to seeing you at hall A2, booth 205. For the most up-to-date information about IFAT and Fluence, be sure to visit www.fluencecorp.com/ifat-2018.

About Fluence Corporation Limited (ASX: FLC)

Fluence has experience operating in over 70 countries worldwide and employs more than 300 highly trained water professionals around the globe. The Company provides local, sustainable treatment and reuse solutions, while empowering businesses and communities worldwide to make the most of their water resources.

Fluence offers an integrated range of services across the complete water cycle, from early stage evaluation, through design and delivery to ongoing support and optimization of water related assets. With established operations in North America, South America, the Middle East and Europe, Fluence is also expanding into China's rural wastewater treatment market.

Global consultancy Frost and Sullivan recently awarded Fluence Corporation "2018 Global Decentralized Water and Wastewater Treatment Company of the Year", noting in their award dissertation:

"While typical decentralized water treatment systems are relatively expensive, complicated, and inefficient, Fluence Corporation leverages innovative and smart technology solutions backed by decades of industrial know-how to excel in water and wastewater treatment solutions. Fluence's excellence becomes apparent through its success, as the company continues to expand its existing offerings as well as partnerships with other prominent companies in the industry. With its easy to use, sustainable, smart and cost-effective solutions as well as a remarkable year of growth, innovation, and leadership, Fluence Corporation earns Frost & Sullivan's 2018 Global Company of the Year Award in the decentralized water and wastewater treatment industry."
